

Design Win

Protecting against the elements

Powerwave Technologies, the premier global source for end-to-end wireless infrastructure solutions, has selected the VCC HMS 462 lens for its VersaFlex™ line of outdoor enclosure solutions. The VersaFlex™ enclosure is designed to maximize available rack space for revenue generating equipment while minimizing overall

footprint. Frequently used in remote locations (e.g. mountain tops where cell tower signals need to be amplified), the LED indicator behind the HMS 462 lens provides an approaching engineer with an immediate system status update without having to enter the base station chamber. This can be critical in inhospitable weather conditions, where unnecessarily opening the enclosure can lead to the damaging of expensive internal systems.

The HMS 462 is a 10mm, Nema 4 rated lens. In addition to keeping water and dust out of the LED socket, the design of the lens allows for easy status viewing, even in direct sunlight.

About Powerwave

Powerwave Technologies, Inc. (NASDAQ: PWAV) is a global leader in end-to-end wireless coverage and capacity solutions for wireless communications networks. Offering cutting edge wireless infrastructure to address the demands of enterprise and commercial customers, Powerwave offers a comprehensive suite of solutions, including Antennas, Base Station Solutions and Coverage Solutions. Powerwave's product line supports all wireless network protocols and frequencies including Next Generation Networks in 4G technology such as WiMAX and LTE. Powerwave solutions, products and services also help wireless operators and OEMs reduce capital and operating expenses, speed rollout of services, improve coverage and capacity, and reduce environmental impact.
